# SAURASHTRA UNIVERSITY

# RAJKOT

**(ACCREDITED GRADE "A" BY NAAC)**

## FACULTY OF PHARMACY

Syllabus for

# M. Pharm. (PHARMACOLOGY)

Choice Based Credit System

**With Effect From: 2017-18**

# PROGRAM OUTCOMES
# POs OF M. PHARM (Pharmacology)

Students of all post undergraduate pharmacy degree programs at the time of graduation will be able to learn:

**PO 1: Research and development**

The students will be able to generate ideas for research, analyse them, execute them and publish the findings.

**PO 2: Domain knowledge:**

Students will be able to acquire knowledge and comprehension of the core and specialization subjects of the respective pharmacy specialization.

**PO 3: Communication skills:**

Students will be able to learn communication by giving seminars, journal club and other organizational activities. They will be able to comprehend and write effective reports, make effective presentations and documentation.

**PO 4: Planning skills:**

Students will be able to demonstrate effective planning abilities including time management, resource management, and organizational skills. They will be able to develop and implement plans and organize work to meet deadlines.

**PO 5: Problem analysis:**

Students will be able to develop, critical thinking and analytical skills while solving problems and making decisions in dissertation research.

**PO 6: Usage of contemporary research tools and techniques:**

Students will be able to learn, select, and apply appropriate current methods and procedures in modern pharmaceutical research with an understanding of the limitations.

**PO 7: Social responsibilities:**

Students will be able to understand, analyze and communicate the value of their professional roles in society (e.g. as health care professionals, promoters of health, educators, managers, employers, employees).

**PO 8: Continuous learning:**

They will be able to recognize the need for continuous up gradation of their knowledge and skills

# PROGRAM SPECIFIC OUTCOMES
# PSOs OF M. PHARM (Pharmacology)

Students of all post undergraduate pharmacy degree programs at the time of graduation will be able to

**POS1:** Students will learn medical writing and ethics, drug marketing and patient counselling skills

**POS2:** Students will learn various skills such as therapeutics and counselling skills, Medicinal and scientific research skills, Communication skills and Interpersonal skills

**POS3:** Students will learn the history of pharmacology, development of pharmacology in India and global scenario.

**POS4:** Students will learn the concept of adverse drug reactions and drug toxicity so that it can be minimized.

**POS5:** Students will learn commonly used instruments in experimental pharmacology by handling them. They will learn standard operating procedures in handling glassware's and equipment's required for pharmacology practical.

**POS6:** Students will learn the concept of rational drug treatment during pregnancy and lactation, paediatric patients & in geriatric patients.

**POS7:** Students will learn the process of new drug discovery and development of drug, and understand the basics of pharmacokinetic and pharmacodynamics.

**POS8:** Students will learn the pharmacotherapy and pharmacological features of common and important drugs used in various diseases/disorders by understanding the classification, mechanism of action, pharmacological action, pharmacokinetic, therapeutic uses and contraindications of drug acting on various systems of the body.

**POS9:** Students will learn regulatory guidelines such as CPCSEA, ICMR, CDSCO and OECD guidelines.

**POS10:** Students will learn various methods to minimise drug-drug interaction and prescription errors by doing its analysis. They will be able to learn the mechanism of adverse drug reactions and pharmacovigilance.

**POS11:** Students will learn the clinical aspects of drug development and the hospital pharmacy management.

**POS12:** Students will learn research and development by doing dissertation in pharmacology

**POS13:** Students will learn scientific writing skills and follow ethics in writing. They will develop critical thinking in scientific research.

# DEPARTMENT OF PHARMACEUTICAL SCIENCES
## Course Structure and Scheme of Examination
## SEMESTER I

| Subject Code | Title of the Course | Course Credit | No. of Hrs. per week | Weightage for internal examination | Weightage for end semester examination | Total Marks | Duration of semester end exam in Hrs. |
|---|---|---|---|---|---|---|---|
| **MPL 101T** | Modern Pharmaceutical Analytical Techniques | 4 | 4 | 25 | 75 | 100 | 3 |
| **MPL 102T** | Advanced Pharmacology-I | 4 | 4 | 25 | 75 | 100 | 3 |
| **MPL 103T** | Pharmacological and Toxicological Screening Methods-I | 4 | 4 | 25 | 75 | 100 | 3 |
| **MPL 104T** | Cellular and Molecular Pharmacology | 4 | 4 | 25 | 75 | 100 | 3 |
| **MPL 105P** | Pharmacology Practical I | 6 | 12 | 50 | 100 | 150 | 6 |
| - | Seminar/Assignment | 4 | 07 | - | 100 | 100 | - |
| **Total** | | **26** | **35** | | | **650** | |

# SEMESTER II

| Subject Code | Title of the Course | Course Credit | No. of Hrs. per week | Weightage for internal examination | Weightage for end semester examination | Total Marks | Duration of semester end exam in Hrs. |
|---|---|---|---|---|---|---|---|
| **MPL 201T** | Advanced Pharmacology II | 4 | 4 | 25 | 75 | 100 | 3 |
| **MPL 202T** | Pharmacological and Toxicological Screening Methods-II | 4 | 4 | 25 | 75 | 100 | 3 |
| **MPL 203T** | Principles of Drug Discovery | 4 | 4 | 25 | 75 | 100 | 3 |
| **MPL 204T** | Experimental Pharmacology practical- II | 4 | 4 | 25 | 75 | 100 | 3 |
| **MPL 205P** | Pharmacology Practical II | 6 | 12 | 50 | 100 | 150 | 6 |
| - | Seminar/Assignment | 4 | 07 | - | 100 | 100 | - |
| | **Total** | **26** | **35** | | | **650** | |

## SEMESTER III

| Subject Code | Title of the Course | Course Credit | No. of Hrs. per week | Weightage for internal examination | Weightage for end semester examination | Total Marks | Duration of semester end exam in Hrs. |
|---|---|---|---|---|---|---|---|
| **MRM 301T** | Research Methodology and Biostatistics* | 4 | 4 | 25 | 75 | 100 | 3 Hrs. |
| - | Journal club | 1 | 1 | 25 | - | 25 | - |
| - | Discussion / Presentation (Proposal Presentation) | 2 | 2 | 50 | - | 50 | - |
| - | Research Work | 14 | 28 | - | 350 | 350 | 1 Hr. |
| **Total** | | **21** | **35** | | | **525** | |

## SEMESTER IV

| Subject Code | Title of the Course | Course Credit | No. of Hrs. per week | Weightage for internal examination | Weightage for end semester examination | Total Marks | Duration of semester end exam in Hrs. |
|---|---|---|---|---|---|---|---|
| - | Journal club | 01 | 01 | 25 | - | 25 | - |
| - | Discussion / Presentation (Proposal Presentation) | 03 | 03 | 75 | - | 75 | - |
| - | Research work and Colloquium | 16 | 31 | - | 400 | 400 | 1 Hr |
| **Total** | | **20** | **35** | | | **500** | |

# M.PHARM PHARMACOLOGY SEMESTER I
# Modern Pharmaceutical Analytical Techniques (MPL 101T)
# Theory: 4 Hrs. /Week

**Scope**

This subject deals with various advanced analytical instrumental techniques for identification, characterization and quantification of drugs. Instruments dealt are NMR, Mass spectrometer, IR, HPLC, GC etc.

**Objectives**

After completion of course student is able to know about,

- Chemicals and Excipients
- The analysis of various drugs in single and combination dosage forms
- Theoretical and practical skills of the instruments

**Course Outcomes**

**CO.1:** The subject will teach graduates advanced analytical techniques like NMR, Mass spectrometer, IR, HPLC, HPTLC etc. which can help them in their professional carrier.

**CO.2:** This will learn student's theoretical practical skills of the instruments and even the qualitative and quantitative parameters of the drug.

## Course content

**Unit 1** **10 Hrs**

a) **UV-Visible spectroscopy:** Introduction, Theory, Laws, Instrumentation associated with UV-Visible spectroscopy, Choice of solvents and solvent effect and Applications of UV-Visible spectroscopy.

b) **IR spectroscopy:** Theory, Modes of Molecular vibrations, Sample handling, Instrumentation of Dispersive and Fourier – Transform IR Spectrometer, Factors affecting vibrational frequencies and Applications of IR spectroscopy

c) **Spectroflourimetry:** Theory of Fluorescence, Factors affecting fluorescence, Quenchers, Instrumentation and Applications of fluorescence spectrophotometer.

d) **Flame emission spectroscopy and Atomic absorption spectroscopy:** Principle, Instrumentation, Interferences and Applications.

**Unit 2** **10 Hrs**

NMR spectroscopy: Quantum numbers and their role in NMR, Principle, Instrumentation, Solvent requirement in NMR, Relaxation process, NMR signals in various compounds, Chemical shift, Factors influencing chemical shift, Spin-Spin coupling, Coupling constant, Nuclear magnetic double resonance, Brief outline of principles of FT-NMR and 13C NMR. Applications of NMR spectroscopy.

**Unit 3** **10 Hrs**

Mass Spectroscopy: Principle, Theory, Instrumentation of Mass Spectroscopy, Different types of ionization like electron impact, chemical, field, FAB and MALDI, APCI, ESI,

APPI Analysers of Quadrupole and Time of Flight, Mass fragmentation and its rules, Meta stable ions, Isotopic peaks and Applications of Mass spectroscopy.

**Unit 4** **10 Hrs**

**Chromatography:** Principle, apparatus, instrumentation, chromatographic parameters, factors affecting resolution, isolation of drug from excipients, data interpretation and applications of the following:

a) Thin Layer chromatography
b) High Performance Thin Layer Chromatography
c) Ion exchange chromatography
d) Column chromatography
e) Gas chromatography
f) High Performance Liquid chromatography
g) Ultra High Performance Liquid chromatography
h) Affinity chromatography
i) Gel Chromatography

**Unit 5** **10 Hrs**

**Electrophoresis:** Principle, Instrumentation, working conditions, factors affecting separation and applications of the following:

a) Paper electrophoresis
b) Gel electrophoresis
c) Capillary electrophoresis
d) Zone electrophoresis
e) Moving boundary electrophoresis
f) Iso electric focusing

**X ray Crystallography:** Production of X rays, Different X ray methods, Bragg's law, Rotating crystal technique, X ray powder technique, Types of crystals and applications of X-ray diffraction.

**Unit 6** **10 Hrs**

**Potentiometry:** Principle, working, Ion selective Electrodes and Application of potentiometry.

**Thermal Techniques**: Principle, thermal transitions and Instrumentation (Heat flux and power-compensation and designs), Modulated DSC, Hyper DSC, experimental parameters (sample preparation, experimental conditions, calibration, heating and cooling rates, resolution, source of errors) and their influence, advantage and disadvantages, pharmaceutical applications.

**Differential Thermal Analysis (DTA):** Principle, instrumentation and advantage and disadvantages, pharmaceutical applications, derivative differential thermal analysis (DDTA).

**TGA:** Principle, instrumentation, factors affecting results, advantage and disadvantages, pharmaceutical applications.

# M.PHARM PHARMACOLOGY SEMESTER I
# Advanced Pharmacology – I (MPL 102T)
# Theory: 4 Hrs. /Week

**Scope**

The subject is designed to strengthen the basic knowledge in the field of pharmacology and to impart recent advances in the drugs used for the treatment of various diseases. In addition, this subject helps the students to understand the concepts of drug action and mechanisms involved.

**Objectives**

Upon completion of the course the student shall be able to:

- Discuss the pathophysiology and pharmacotherapy of certain diseases
- Explain the mechanism of drug actions at cellular and molecular level
- Understand the adverse effects, contraindications and clinical uses of drugs used in treatment of diseases

**Course Outcomes**

**CO.1:** It strengthens the knowledge of Pharmacology, Pathophysiology and Pharmacotherapeutics.

**CO.2:** It makes students to understand the mechanism of the drug at molecular level, adverse drug effect, clinical use, Contraindications, and dosage of the drug

## Course content

**Unit 1.** **12 Hrs.**

**General Pharmacology**

a) Pharmacokinetics: The dynamics of drug absorption, distribution, biotransformation and elimination. Concepts of linear and non-linear compartment models. Significance of Protein binding.

b) Pharmacodynamics: Mechanism of drug action and the relationship between drug concentration and effect. Receptors, structural and functional families of receptors, quantitation of drug receptors interaction and elicited effects.

**Unit 2.** **12 Hrs.**

**Neurotransmission**

a) General aspects and steps involved in neurotransmission.

b) Neurohumoral transmission in autonomic nervous system (Detailed study about neurotransmitters- Adrenaline and Acetyl choline).

c) Neurohumoral transmission in central nervous system (Detailed study about neurotransmitters- histamine, serotonin, dopamine, GABA, glutamate and glycine].

d) Non adrenergic non cholinergic transmission (NANC). Co- transmission

**Systemic Pharmacology**

a) A detailed study on pathophysiology of diseases, mechanism of action, pharmacology and toxicology of existing as well as novel drugs used in the following systems

b) Autonomic Pharmacology

c) Parasympathomimetics and lytics, sympathomimetics and lytics, agents affecting neuromuscular junction

**Unit 3.** **12 Hrs.**

- Central nervous system Pharmacology
- General and local anesthetics
- Sedatives and hypnotics, drugs used to treat anxiety.
- Depression, psychosis, mania, epilepsy, neurodegenerative diseases.
- Narcotic and non-narcotic analgesics.

**Unit 4.** **12 Hrs.**

- Cardiovascular Pharmacology
- Diuretics, antihypertensives, antiischemics, anti- arrhythmics, drugs for heart failure and hyperlipidemia.
- Hematinics, coagulants , anticoagulants, fibrinolytics and anti- platelet drugs

**Unit 5.** **12 Hrs.**

- Autocoid Pharmacology
- The physiological and pathological role of Histamine, Serotonin, Kinins Prostaglandins Opioid autocoids.
- Pharmacology of antihistamines, 5HT antagonists.

**REFEERENCES**

1. The Pharmacological Basis of Therapeutics, Goodman and Gillman‘s
2. Principles of Pharmacology. The Pathophysiologic basis of drug Therapy by David E Golan, Armen H, Tashjian Jr, Ehrin J,Armstrong, April W, Armstrong, Wolters, Kluwer-Lippincott Williams & Wilkins Publishers.

# M.PHARM PHARMACOLOGY SEMESTER I
# Pharmacological and Toxicological Screening Methods – I
# (MPL 103T)
# Theory: 4 Hrs. /Week

**Scope**

This subject is designed to impart the knowledge on preclinical evaluation of drugs and recent experimental techniques in the drug discovery and development. The subject content helps the student to understand the maintenance of laboratory animals as per the guidelines, basic knowledge of various in-vitro and in-vivo preclinical evaluation processes

**Objectives**

Upon completion of the course the student shall be able to,

- Appraise the regulations and ethical requirement for the usage of experimental animals.
- Describe the various animals used in the drug discovery process and good laboratory practices in maintenance and handling of experimental animals
- Describe the various newer screening methods involved in the drug discovery process
- Appreciate and correlate the preclinical data to humans

**Course Outcome**

**CO.1:** Exhibit awareness and responsiveness to the system of health care including preclinical evaluation of drugs, ethical requirement for the usage of animal experiments, and regulations of the experiments.

**CO.2:** Graduates are able to understand the process of drug discovery, in-vivo, in-vitro experiments, and newer screening methods.

## Course content

**Unit 1.** **12 Hrs**

**Laboratory Animals**

- Common laboratory animals: Description, handling and applications of different species and strains of animals.
- Transgenic animals: Production, maintenance and applications Anaesthesia and euthanasia of experimental animals.
- Maintenance and breeding of laboratory animals. CPCSEA guidelines to conduct experiments on animals
- Good laboratory practice.
- Bioassay-Principle, scope and limitations and methods.

**Unit 2.** **12 Hrs.**

- Preclinical screening of new substances for the pharmacological activity using in vivo, in vitro, and other possible animal alternative models.

- General principles of preclinical screening. CNS Pharmacology: behavioural and muscle coordination, CNS stimulants and depressants, anxiolytics, anti-psychotics, anti-epileptics and nootropics. Drugs for neurodegenerative diseases like Parkinsonism, Alzheimers and multiple sclerosis. Drugs acting on Autonomic Nervous System.

**Unit 3.** **12 Hrs.**

- Preclinical screening of new substances for the pharmacological activity using in vivo, in vitro, and other possible animal alternative models.
- Respiratory Pharmacology: anti-asthmatics, drugs for COPD and anti allergics. Reproductive Pharmacology: Aphrodisiacs and antifertility agents Analgesics, anti-inflammatory and antipyretic agents. Gastrointestinal drugs: anti-ulcer, anti -emetic, anti- diarrheal and laxatives.

**Unit 4.** **12 Hrs.**

- Preclinical screening of new substances for the pharmacological activity using in vivo, in vitro, and other possible animal alternative models.
- Cardiovascular Pharmacology: antihypertensives, antiarrythmics, antianginal, antiatherosclerotic agents and diuretics. Drugs for metabolic disorders like anti-diabetic, antidyslipidemic agents. Anti-cancer agents. Hepatoprotective screening methods.

**Unit 5.** **12 Hrs.**

- Preclinical screening of new substances for the pharmacological activity using in vivo, in vitro, and other possible animal alternative models.
- Iimmunomodulators, Immunosuppressants and immunostimulants
- General principles of immunoassay: theoretical basis and optimization of immunoassay, heterogeneous and homogenous immunoassay systems. Immunoassay methods evaluation; protocol outline, objectives and preparation. Immunoassay for digoxin and insulin
- Limitations of animal experimentation and alternate animal experiments.
- Extrapolation of in vitro data to preclinical and preclinical to humans

# M.PHARM PHARMACOLOGY SEMESTER I
# Cellular and Molecular Pharmacology (MPL 104T)
# Theory: 4 Hrs. /Week

**Scope**

The subject imparts a fundamental knowledge on the structure and functions of cellular components and help to understand the interaction of these components with drugs. This information will further help the student to apply the knowledge in drug discovery process.

**Objectives**

Upon completion of the course, the student shall be able to,

- Explain the receptor signal transduction processes.
- Explain the molecular pathways affected by drugs.
- Appreciate the applicability of molecular pharmacology and biomarkers in drug discovery process.
- Demonstrate molecular biology techniques as applicable for pharmacology

**Course Outcome**

**CO.1:** Graduates will be able to take interest in research & development in all areas pertaining to Pharmacology.

**CO.2:** They are able to understand receptor signal transduction processes, molecular pathways affected by drugs.

**CO.3:** This information will further help the student to apply the knowledge in drug discovery process.

## Course content

**Unit 1.** **12 Hrs**

- Cell biology
- Structure and functions of cell and its organelles
- Genome organization. Gene expression and its regulation, importance of siRNA and micro RNA, gene mapping and gene sequencing
- Cell cycles and its regulation.
- Cell death– events, regulators, intrinsic and extrinsic pathways of apoptosis.
- Necrosis and autophagy.

**Unit 2.** **12 Hrs**

- Cell signaling
- Intercellular and intracellular signaling pathways.
- Classification of receptor family and molecular structure ligand gated ion channels; G-protein coupled receptors, tyrosine kinase receptors and nuclear receptors.

- Secondary messengers: cyclic AMP, cyclic GMP, calcium ion, inositol 1,4,5-trisphosphate, (IP3), NO, and diacylglycerol.
- Detailed study of following intracellular signaling pathways: cyclic AMP signaling pathway, mitogen-activated protein kinase (MAPK) signaling, Janus kinase (JAK)/signal transducer and activator of transcription (STAT) signaling pathway.

**Unit 3.** **12 Hrs**

- Principles and applications of genomic and proteomic tools DNA electrophoresis, PCR (reverse transcription and real time), Gene sequencing, micro array technique, SDS page, ELISA and western blotting,
- Recombinant DNA technology and gene therapy
- Basic principles of recombinant DNA technology-Restriction enzymes, various types of vectors. Applications of recombinant DNA technology.
- Gene therapy- Various types of gene transfer techniques, clinical applications and recent advances in gene therapy.

**Unit 4.** **12 Hrs**

- Pharmacogenomics
- Gene mapping and cloning of disease gene.
- Genetic variation and its role in health/ pharmacology Polymorphisms affecting drug metabolism
- Genetic variation in drug transporters
- Genetic variation in G protein coupled receptors
- Applications of proteomics science: Genomics, proteomics, metabolomics, functionomics, nutrigenomics Immunotherapeutics
- Types of immunotherapeutics, humanisation antibody therapy, Immunotherapeutics in clinical practice

**Unit 5.** **12 Hrs**

a) Cell culture techniques

Basic equipment used in cell culture lab. Cell culture media, various types of cell culture, general procedure for cell cultures; isolation of cells, subculture, cryopreservation, characterization of cells and their application.

Principles and applications of cell viability assays, glucose uptake assay, Calcium influx assays

Principles and applications of flow cytometry

b) Biosimilars

# M.PHARM PHARMACOLOGY SEMESTER I
# Sub code: MPL 105
# Core sub 5: Pharmacological Practical – I
# Practical: 12 Hrs. /Week

1. Analysis of pharmacopoeia compounds and their formulations by UV Vis spectrophotometer
2. Simultaneous estimation of multi component containing formulations by UV spectrophotometry
3. Experiments based on HPLC
4. Experiments based on Gas Chromatography
5. Estimation of riboflavin/quinine sulphate by fluorimetry
6. Estimation of sodium/potassium by flame photometry

**Handling of laboratory animals.**

1. Various routes of drug administration.
2. Techniques of blood sampling, anesthesia and euthanasia of experimental animals.
3. Functional observation battery tests (modified Irwin test)
4. Evaluation of CNS stimulant, depressant, anxiogenics and anxiolytic, anticonvulsant activity.
5. Evaluation of analgesic, anti-inflammatory, local anesthetic, mydriatic and miotic activity.
6. Evaluation of diuretic activity.
7. Evaluation of antiulcer activity by pylorus ligation method.
8. Oral glucose tolerance test.
9. Isolation and identification of DNA from various sources (Bacteria, Cauliflower, onion, Goat liver).
10. Isolation of RNA from yeast
11. Estimation of proteins by Braford/Lowry's in biological samples.
12. Estimation of RNA/DNA by UV Spectroscopy
13. Gene amplification by PCR.
14. Protein quantification Western Blotting.
15. Enzyme based in-vitro assays (MPO, AChEs, α amylase, α glucosidase).
16. Cell viability assays (MTT/Trypan blue/SRB).
17. DNA fragmentation assay by agarose gel electrophoresis.
18. DNA damage study by Comet assay.
19. Apoptosis determination by fluorescent imaging studies.

20. Pharmacokinetic studies and data analysis of drugs given by different routes of administration using softwares
21. Enzyme inhibition and induction activity
22. Extraction of drug from various biological samples and estimation of drugs in biological fluids using different analytical techniques (UV)
23. Extraction of drug from various biological samples and estimation of drugs in biological fluids using different analytical techniques (HPLC)

# M.PHARM PHARMACOLOGY SEMESTER II
# Advanced Pharmacology – II (MPL 201T)
# Theory: 4 Hrs. /Week

**Scope**

The subject is designed to strengthen the basic knowledge in the field of pharmacology and to impart recent advances in the drugs used for the treatment of various diseases. In addition, this subject helps the students to understand the concepts of drug action and mechanisms involved.

**Objectives**

Upon completion of the course the student shall be able to

- Discuss the pathophysiology and pharmacotherapy of certain diseases
- Explain the mechanism of drug actions at cellular and molecular level
- Understand the adverse effects, contraindications and clinical uses of drugs used in treatment of diseases

**Course Outcomes**

**CO.1:** strengthens the knowledge of Pharmacology, Pathophysiology and Pharmacotherapeutics.

**CO.2:** It makes students to understand the mechanism of the drug at molecular level, adverse drug effect, clinical use, Contraindications, and dosage of the drug

## Course content

**Unit 1** **12 Hrs.**

- Endocrine Pharmacology
- Molecular and cellular mechanism of action of hormones such as growth hormone,
- prolactin, thyroid, insulin and sex hormones
- Anti-thyroid drugs, Oral hypoglycemic agents, Oral contraceptives, Corticosteroids.
- Drugs affecting calcium regulation

**Unit 2** **12 Hrs.**

- Chemotherapy
- Cellular and molecular mechanism of actions and resistance of antimicrobial agents
- such as ß-lactams, aminoglycosides, quinolones, Macrolide antibiotics. Antifungal, antiviral, anti-TB drugs.

**Unit 3** **12Hrs.**

- Chemotherapy
- Drugs used in Protozoal Infections

- Drugs used in the treatment of Helminthiasis Chemotherapy of cancer Immunopharmacology
- Cellular and biochemical mediators of inflammation and immune response. Allergic or hypersensitivity reactions. Pharmacotherapy of asthma and
- COPD.
- Immunosuppressants and Immunostimulants

**Unit 4** **12 Hrs.**

- GIT Pharmacology
- Antiulcer drugs, Prokinetics, antiemetics, anti-diarrheals and drugs for constipation and irritable bowel syndrome.
- Chronopharmacology
- Biological and circadian rhythms, applications of chronotherapy in various diseases like cardiovascular disease, diabetes, asthma and peptic ulcer

**Unit 5** **12 Hrs.**

- Free radicals Pharmacology
- Generation of free radicals, role of free radicals in etiopathology of various diseases such as diabetes, neurodegenerative diseases and cancer. Protective activity of certain important antioxidant
- Recent Advances in Treatment: Alzheimer's disease, Parkinson's disease, Cancer, Diabetes mellitus

**CO.2:** Graduates are able to understand the process of drug discovery, in-vivo, in-vitro experiments, and newer screening methods.

## Course content

**Unit 1** **12 Hrs.**

Basic definition and types of toxicology (general, mechanistic, regulatory and descriptive) Regulatory guidelines for conducting toxicity studies OECD, ICH, EPA and Schedule Y OECD principles of Good laboratory practice (GLP) History, concept and its importance in drug development

**Unit 2** **12 Hrs.**

Acute, sub-acute and chronic- oral, dermal and inhalational studies as per OECD guidelines. Acute eye irritation, skin sensitization, dermal irritation & dermal toxicity studies. Test item characterization- importance and methods in regulatory toxicology studies

**Unit 3** **12 Hrs.**

- Reproductive toxicology studies, Male reproductive toxicity studies, female reproductive studies (segment I and segment III), teratogenecity studies (segment II)
- Genotoxicity studies (Ames Test, in vitro and in vivo Micronucleus and Chromosomal aberrations studies) In vivo carcinogenicity studies

**Unit 4** **12 Hrs.**

IND enabling studies (IND studies)- Definition of IND, importance of IND, industry perspective, list of studies needed for IND submission. Safety pharmacology studies- origin, concepts and importance of safety pharmacology. Tier1- CVS, CNS and respiratory safety pharmacology, HERG assay. Tier2- GI, renal and other studies

**Unit 5** **12 Hrs.**

Toxicokinetics- Toxicokinetic evaluation in preclinical studies, saturation kinetics Importance and applications of toxicokinetic studies. Alternative methods to animal toxicity testing.

**REFERENCES**

**16.** 2005, ministry of health and family welfare (department of health) New Delhi

**17.** Drugs from discovery to approval by Rick NG.

**18.** Animal Models in Toxicology, 3rd Edition, Lower and Bryan

**19.** OECD test guidelines.

**20.** Principles of toxicology by Karen E. Stine, Thomas M. Brown.

**21.** Guidance for Industry M3(R2) Nonclinical Safety Studies for the Conduct of Human Clinical Trials and Marketing Authorization for Pharmaceuticals (http://www.fda.gov/downloads/drugs/guidancecomplianceregulatoryinformation/guidances/ucm073246.pdf)

# M.PHARM PHARMACOLOGY SEMESTER II
# Principles of Drug Discovery (MPL 203T)
# Theory: 4 Hrs. /Week

**Scope**

The subject imparts basic knowledge of drug discovery process. This information will make the student competent in drug discovery process

**Objectives**

Upon completion of the course, the student shall be able to,

- Explain the various stages of drug discovery.
- Appreciate the importance of the role of genomics, proteomics and bioinformatics in drug discovery
- Explain various targets for drug discovery.
- Explain various lead seeking method and lead optimization
- Appreciate the importance of the role of computer aided drug design in drug discovery

**Course Outcome**

**CO.1:** Graduates will be able to take interest in research & development in all areas pertaining to Pharmacology.

**CO.2:** They are able to understand receptor signal transduction processes, molecular pathways affected by drugs.

**CO.3:** This information will further help the student to apply the knowledge in drug discovery process.

## Course content

**Unit 1** **12 Hrs.**

An overview of modern drug discovery process: Target identification, target validation, lead identification and lead Optimization. Economics of drug discovery.

Target Discovery and validation-Role of Genomics, Proteomics and Bioinformatics. Role of Nucleic acid microarrays, Protein microarrays, Antisense technologies, siRNAs, antisense oligonucleotides, Zinc finger proteins. Role of transgenic animals in target validation.

**Unit 2** **12 Hrs.**

Lead Identification- combinatorial chemistry & high throughput screening, in silico lead discovery techniques, Assay development for hit identification.

Protein structure, Levels of protein structure, Domains, motifs, and folds in protein structure. Computational prediction of protein structure: Threading and homology modeling methods. Application of NMR and X-ray crystallography in protein structure prediction

**Unit 3** **12 Hrs.**

**Rational Drug Design**

Traditional vs rational drug design, Methods followed in traditional drug design, High throughput screening, Concepts of Rational Drug Design, Rational Drug Design Methods: Structure and Pharmacophore based approaches, Virtual Screening techniques: Drug likeness screening, Concept of pharmacophore mapping and pharmacophore based Screening

**Unit 4** **12 Hrs.**

Molecular docking: Rigid docking, flexible docking, manual docking; Docking based screening. De novo drug design. Quantitative analysis of Structure Activity Relationship

History and development of QSAR, SAR versus QSAR, Physicochemical parameters, Hansch analysis, Fee Wilson analysis and relationship between them.

**Unit 5** **12 Hrs.**

QSAR Statistical methods – regression analysis, partial least square analysis (PLS) and other multivariate statistical methods. 3D-QSAR approaches like COMFA and COMSIA

Prodrug design-Basic concept, Prodrugs to improve patient acceptability, Drug solubility, Drug absorption and distribution, site specific drug delivery and sustained drug action. Rationale of prodrug design and practical consideration of prodrug design

# M.PHARM PHARMACOLOGY SEMESTER II
# Clinical Research and Pharmacovigilance (MPL 204T)
# Theory: 4 Hrs. /Week

**Scope:**

This subject will provide a value addition and current requirement for the students in clinical research and pharmacovigilance. It will teach the students on conceptualizing, designing, conducting, managing and reporting of clinical trials. This subject also focuses on global scenario of Pharmacovigilance in different methods that can be used to generate safety data. It will teach the students in developing drug safety data in Pre-clinical, Clinical phases of Drug development and post market surveillance.

**Objectives:**

Upon completion of the course, the student shall be able to,

- Explain the regulatory requirements for conducting clinical trial
- Demonstrate the types of clinical trial designs
- Explain the responsibilities of key players involved in clinical trials
- Execute safety monitoring, reporting and close-out activities
- Explain the principles of Pharmacovigilance
- Detect new adverse drug reactions and their assessment
- Perform the adverse drug reaction reporting systems and communication in Pharmacovigilance

**Course Outcome**

**CO.1:** Graduates are able to demonstrate different phases of clinical trial, able to understand regulatory requirements for clinical trial.

**CO.2:** Students are able to design, conduct and manage the clinical trial. They can detect new adverse drug reactions.

**CO.3:** They are able to understand the principles of Pharmacovigilance.

## Course content

**Unit 1** **12 Hrs**

**Regulatory Perspectives of Clinical Trials:**

- Origin and Principles of International Conference on Harmonization - Good Clinical Practice (ICH-GCP) guidelines Ethical Committee: Institutional Review Board, Ethical Guidelines for Biomedical Research and Human Participant- Schedule Y, ICMR
- Informed Consent Process: Structure and content of an Informed Consent Process Ethical principles governing informed consent process

**Unit 2** **12 Hrs**

Clinical Trials: Types and Design Experimental Study- RCT and Non RCT, Observation Study: Cohort, Case control, Cross sectional, Clinical Trial Study Team, Roles and

responsibilities of Clinical Trial Personnel: Investigator, Study Coordinator, Sponsor, Contract Research Organization and its management

**Unit 3** **12 Hrs**

- Clinical Trial Documentation- Guidelines to the preparation of documents, Preparation of protocol, Investigator Brochure, Case Report Forms, Clinical Study Report Clinical Trial Monitoring- Safety Monitoring in CT
- Adverse Drug Reactions: Definition and types. Detection and reporting methods. Severity and seriousness assessment. Predictability and preventability assessment, Management of adverse drug reactions; Terminologies of ADR.

**Unit 4** **12 Hrs**

- Basic aspects, terminologies and establishment of pharmacovigilance
- History and progress of pharmacovigilance, Significance of safety monitoring, Pharmacovigilance in India and international aspects, WHO international drug monitoring programme, WHO and Regulatory terminologies of ADR, evaluation of medication safety,
- Establishing pharmacovigilance centres in Hospitals, Industry and National programmes related to pharmacovigilance. Roles and responsibilities in Pharmacovigilance

**Unit 5** **12 Hrs**

**Methods, ADR reporting and tools used in Pharmacovigilance**

International classification of diseases, International Non- proprietary names for drugs, Passive and Active surveillance, Comparative observational studies, Targeted clinical investigations and Vaccine safety surveillance. Spontaneous reporting system and Reporting to regulatory authorities, Guidelines for ADRs reporting. Argus, Aris G Pharmacovigilance, VigiFlow, Statistical methods for evaluating medication safety data

**Pharmacoepidemiology, pharmacoeconomics, safety pharmacology**

## M.PHARM PHARMACOLOGY SEMESTER II
## Pharmacological Practical II (MPL 205)
## Practical: 12 Hrs. /Week

1. To record the DRC of agonist using suitable isolated tissues preparation.
2. To study the effects of antagonist/potentiating agents on DRC of agonist using suitable isolated tissue preparation.
3. To determine to the strength of unknown sample by matching bioassay by using suitable tissue preparation.
4. To determine to the strength of unknown sample by interpolation bioassay by using suitable tissue preparation
5. To determine to the strength of unknown sample by bracketing bioassay by using suitable tissue preparation
6. To determine to the strength of unknown sample by multiple point bioassay by using suitable tissue preparation.
7. Estimation of PA2 values of various antagonists using suitable isolated tissue preparations.
8. To study the effects of various drugs on isolated heart preparations
9. Recording of rat BP, heart rate and ECG.
10. Recording of rat ECG
11. Drug absorption studies by averted rat ileum preparation.
12. Acute oral toxicity studies as per OECD guidelines.
13. Acute dermal toxicity studies as per OECD guidelines.
14. Repeated dose toxicity studies- Serum biochemical, haematological, urine analysis, functional observation tests and histological studies.
15. Drug mutagenicity study using mice bone-marrow chromosomal aberration test.
16. Protocol design for clinical trial.(3 Nos.)
17. Design of ADR monitoring protocol.
18. In-silico docking studies. (2 Nos.)
19. In-silico pharmacophore based screening.
20. In-silico QSAR studies.
21. ADR reporting

# M. PHARM SEMESTER III
# RESEARCH METHODOLOGY & BIOSTATISTICS
# (MRM 301T)
# Theory: 4 Hrs. /Week

**Scope**

This subject deals with various established methods used in pharmaceutical research.

**Objectives**

Upon completion of the course student shall be able to understand

Learn general research methodology and the basic concepts of biostatistics.

Understand the functions of ethics committees in medical research.

**Course Outcomes**

**CO1** Able to carry out different parametric and non-parametric tests

**CO2** Lean about the ethics committee and its function in medical research

**CO3** Learn the guidelines for the experimentation on animals

**CO4** prepare protocol for Animal study

## Course content

**Unit 1** **12 Hrs**

**General Research Methodology:**

Research, objective, requirements, practical difficulties, review of literature, study design, types of studies, strategies to eliminate errors/bias, controls, randomization, crossover design, placebo, blinding techniques.

**Unit 2** **12 Hrs**

**Biostatistics:**

Definition, application, sample size, importance of sample size, factors influencing sample size, dropouts, statistical tests of significance, type of significance tests, parametric tests(students "t" test, ANOVA, Correlation coefficient, regression), non-parametric tests (wilcoxan rank tests, analysis of variance, correlation, chi square test), null hypothesis, P values, degree of freedom, interpretation of P values.

**Unit 3** **12 Hrs**

**Medical Research:**

History, values in medical ethics, autonomy, beneficence, non- maleficence, double effect, conflicts between autonomy and beneficence/non- maleficence, euthanasia, informed consent, confidentiality, criticisms of orthodox medical ethics, importance of communication, control resolution, guidelines, ethics committees, cultural concerns, truth telling, online business practices, conflicts of interest, referral, vendor relationships, treatment of family members, sexual relationships, fatality.

**Unit 4** **12 Hrs**

**CPCSEA guidelines for laboratory animal facility:**

Goals, veterinary care, quarantine, surveillance, diagnosis, treatment and control of disease, personal hygiene, location of animal facilities to laboratories, anaesthesia, euthanasia, physical facilities, environment, animal husbandry, record keeping, SOPs, personnel and training, transport of lab animals.

**Unit 5** **12 Hrs**

**Declaration of Helsinki:**

History, introduction, basic principles for all medical research, and additional principles for medical research combined with medical care.
